Customer Journey Map - NAVA Mobile Banking

From first hearing about the app, through onboarding and daily use, to getting help when something goes wrong.

PS

Pimchanok "Pim", 29
Marketing exec · Bangkok · Ex-holiday on mobile

Persona background
Has holiday, wants a break

Motivation
Handle all banking from her phone without visiting a branch, and see where her money goes each month.

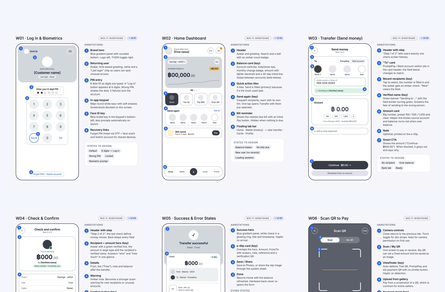

Frustrations
Fear of sending money to the wrong person, long identity checks that fail without explanation.

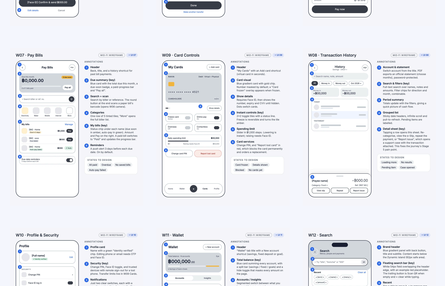

Expectations
Fast, simple and secure, with instant access to a real person when something goes wrong.

	Stage 1 Discover	Stage 2 Onboard	Stage 3 First Use	Stage 4 Everyday Banking	Stage 5 Support & Loyalty
	Ads, friends, word of mouth	Download & sign up	Add funds, explore	Send & pay, daily balance	Rewards, issues, recommend
Actions What she does	Sees a social ad, reads reviews, compares fees with her current bank.	Downloads the app, photographs her ID card, creates a face scan and fills in personal details.	Sets a PIN and Face ID, taps up the virtual card, transfers money to a friend via PromptPay.	Scans QR codes at shops, pays electricity and phone bills, sets a savings goal.	Hits a pending or mistaken transfer, opens in-app chat at the red center until it's fixed.
Touchpoints Where it happens	Social media · Bank website · Friends	App Store / Play Store · e-KYC flow · SMS OTP	Mobile app · Push notifications · e-Slip	Mobile app · Merchant QR · Home screen widget	In-app chat · Call center · Branch
Thoughts What she's thinking	"Can I really open an account online without going to a branch?"	"The ID photo failed again, and it won't tell me why."	"Easier than I expected, but I'll still scared of sending it to the wrong person."	"Scan to pay is so quick. I use it every day."	"I've been on hold forever. Where is my case at?"
Emotions How she feels Pain Joy Trust / Fear / Anticipation	Neutral Curious	Frustrated	Relieved	Delighted	Anxious
Pain Points What goes wrong	Fees and benefits are scattered across pages, hard to compare.	ID photo and face scan fail with no reason given, leaving her way nearer starting over.	Unsure the recipient is correct; security setup has too many steps.	App slows down at month-end; too many notifications feel like spam.	No way to track a case, has to repeat the story every time she calls.
Opportunities How we improve	A clear fee comparison page and a refer-a-friend link with rewards.	Live camera guidance ("move closer", "reduce glare") and saved progress to resume later.	Always show the recipient's name before confirming; favorites; 2-step onboarding.	Quick actions on the login screen, monthly spending summary, notification controls.	In-app case tracker, with context passed to agents automatically.

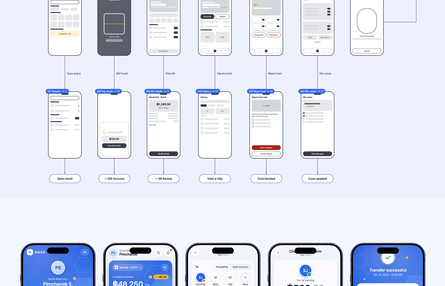

User Flow: Money Transfer in NAVA

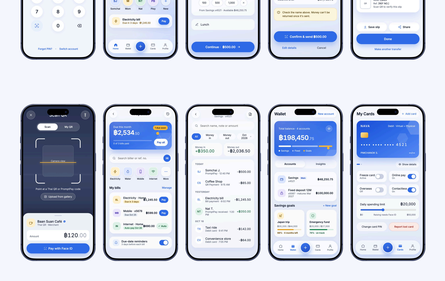

The main path from opening the app to receiving an e-Slip, with decision points and error cases.

Wireframe User Flow

NAVA Bank · 22 wireframes connected by tap paths: first launch & e-KYC, log in, transfer (with ฿50,000 face check), scan to pay, bills, wallet, cards, profile and search.
