Unicity Wallet · Customer journey map

From first open to everyday money habit

Seven stages, mapped to first-session & daily journey. Pinchmark and Monitise add anything unsatisfactory to validate with user research.

Pinchmark, 28 · Office worker, Bangkok · Photo persona

Goals: pay cheap by QR, send money to friends, keep track of monthly spending

Frustrations: crowded wallet apps, unclear fees, fear of sending money to the wrong person

	Stage 1 · Discover	Stage 2 · Sign up and onboard	Stage 3 · Top up	Stage 4 · Pay and transfer	Stage 5 · Confirm	Stage 6 · Receipt and proof	Stage 7 · Return and manage
GOAL	Find a simple way to pay and send money from the phone	Get set up quickly and safely	Put money into the wallet.	Pay a shop or send money to a friend.	Approve the payment safely.	Know it worked and have proof.	Track spending and keep bills paid.
ACTIONS	Hears about the app from a friend, sees an ad, finds the App Store listing	Enters phone number, verifies OTP, sets a 6-digit PIN, reads e-money T&Cs	Taps Top up, picks a bank account, types the $500 top-up, confirms.	Scans a shop QR or picks a recent contact, enters the amount, taps Pay or Send.	Enters the PIN or uses Face ID.	Sees the success screen, shares the slip in chat, goes back to Home.	Filters history, pays a bill from a reminder, manages linked accounts.
TOUCHPOINTS	App store · AI Onboarding · AI Chatbot	Sign up via OTP · Set PIN · AI Chatbot	AI Menu · ID Top up · ID PIN	ID Scan · ID Confirm · ID Transfer · ID Receipt	ID Confirm with PIN	ID Success · ID Details	ID History · ID Alerts · ID Bills · ID Wallet · ID Profile
THINKING	"Is this just another wallet [ref a] nobody?"	"How long will this take?"	"Is there a fee? When does it arrive?"	"Am I sending this to the right person?"	"Is my money safe?"	"Great, I can send the slip to the group."	"Where did my money go this month?"
EMOTION Neutral · Curious · Frustrated · Hopeful · Relieved · Proud	Curious	Resourceful	Unsure	Confident	Cautious	Satisfied	In control
PAIN POINTS	Wallet apps look crowded, it is unclear what makes this one different.	Identity steps feel long, worry about sharing personal data.	Linking a bank the first time, fee and arrival time not obvious.	Fear of paying the wrong person, typing numbers while in a queue.	Forgotten PIN, anxiety about mistakes that cannot be undone.	Slips are hard to find again later.	Bills get forgotten, settings are buried deep in menus.
OPPORTUNITIES	One clear promise on the first screen, with fees always available. **S-01.**	Show sign up progress and say why each detail is needed. **Success-of-1 to design.**	Show fee and arrival time before confirming, use live amount chips. **S-01,** **Ibn with a placeholder.**	Show recipient name and wallet ID before sending. Scan or the centre of the tab bar. **S-05, S1, C2.**	Amount and recipient above the keypad. Face ID option. **S-03, Forgot PIN add to design.**	Share and Save image on success; every payment reopens from History. **S-04, S2.**	Money in and out summary, reminders that open bill payment directly. **S-01, A3.**

User flow · Unicity Wallet

How to read this
Each screen is one tap from some another screen. The label in the top-right number on the screen's header. Arrows show which screens connect.

Hint before or arrows
Many and those used for the previous screen. The bottom tab bar (Home, Wallet, Earn, Menu) keeps up on most screens. Some screens share states (e.g. a panel, like C1 and C2).

Scope
Onboarding (sign up, C1 to C4, add profile, set the PIN settings, finish), help centre, account settings, top up, send money, receive money, pay bills, scan to pay (QR), payment confirmation, receipt, history, spend analysis, budgets, Forgot PIN, top up, and notifications.
