Customer journey map

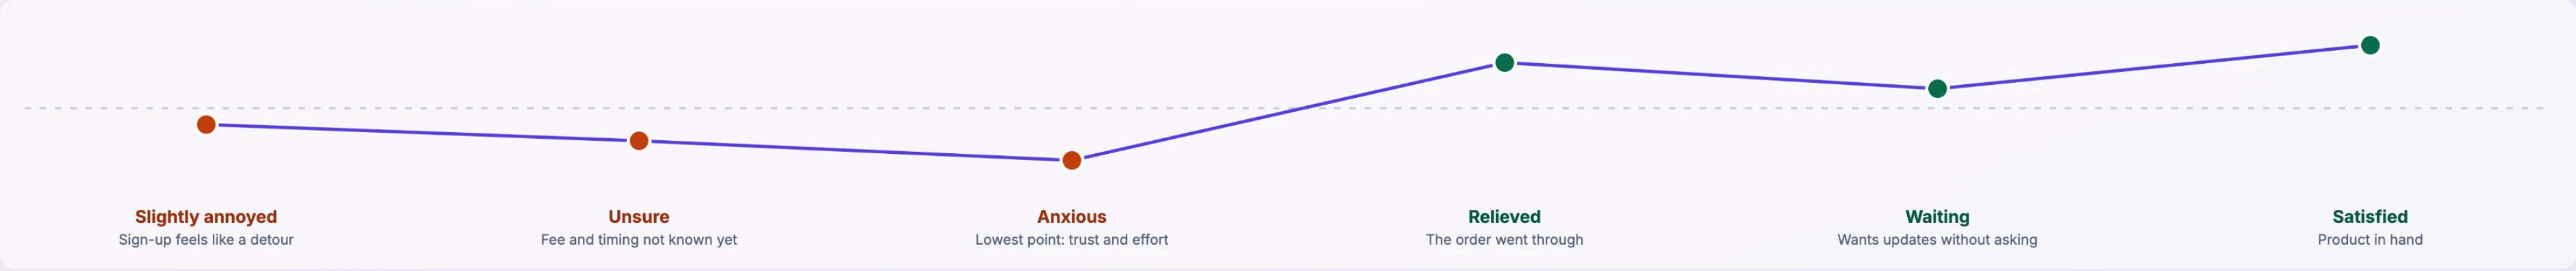
Buying Bios Life S on mobile, from checkout to delivery. A working hypothesis built from the designed flow, to validate with customer research.

PERSONA
[PERSONA NAME]
First-time buyer on mobile (assumed)

SCENARIO
One-time order, ฿4,337.50
New account, home delivery, card payment

	CHECKOUT · STEPS 1–3			AFTER PURCHASE · STEPS 4–6		
STAGE	1 **Contact** Create account or log in	2 **Shipping** Address and delivery method	3 **Payment** Card, QR code or bank	4 **Order confirmed** Payment received, packing	5 **On the way** With the courier	6 **Delivered** Received, rate, reorder
GOAL	Get to checkout fast, without unnecessary sign-up steps.	Get it to the right place, at a cost and time I know upfront.	Pay safely with a method I already trust.	Be sure the order went through and know what happens next.	Know where the parcel is and when it will arrive.	Receive the product in good condition and reorder easily.
DOING	• Logs in, or creates an account • Enters name, email, mobile and password • Accepts T&C; may add a referral code	• Enters address, sub-district, district, province and postal code • Chooses home delivery or pickup	• Picks card, QR code or bank transfer • Types card details, or switches to a bank app • Taps Pay now	• Reads the confirmation and total paid • Notes the order number • Opens the emailed receipt	• Checks the delivery status • Copies the tracking number • Follows the parcel on the courier's site	• Receives the parcel • Rates the order • Buys again, or reports a problem
THINKING	*"Do I really need an account just to buy this?"*	*"How much is shipping, and when will it get here?"*	*"Is my card safe here? Did the payment actually go through?"*	*"Good, it worked. Now when does it ship?"*	*"Is it still on time? Do I need to be home?"*	*"It's here. I'll reorder when this runs out."*

FEELING
Above the dashed line: positive
Below it: negative



TOUCHPOINTS	Contact screen Order summary Log in	Shipping screen Delivery options	Payment screen Banking app Card issuer check	Confirmation screen Email receipt	Tracking screen Courier website Courier driver	Parcel Delivered screen Rating Support
PAIN POINTS	• Account creation is required before buying • Long legal text on a small screen • Password rules not shown upfront	• Shipping fee only appears at this step • Five address fields to type on mobile	• Doubts about card safety • Typing a 16-digit card number • Leaving the app to pay by QR	• Not clear when it will ship • Receipt is hard to find again later	• Has to switch to the courier's site • Has to check back to see if anything changed	• Reordering means repeating checkout • No obvious way to report damage
OPPORTUNITIES	• **In the design:** collapsible order summary keeps the price in view; referral code tucked away as optional • **Next:** guest checkout, show password rules inline	• **In the design:** each delivery option has a slot for fee and timing • **Next:** fill district from postal code, save addresses	• **In the design:** Secure badge, encryption note, total shown above Pay now, save card • **Next:** processing and payment-failed screens	• **In the design:** status tracker sets expectations; Track order is the one next step • **Next:** receipt kept in order history	• **In the design:** one-tap copy of the tracking number • **Next:** notify at each status change, show tracking inside the app	• **In the design:** rating, Buy again and Report a problem • **Next:** reorder with saved details, reminder before it runs out

Feelings, thoughts and pain points are assumptions drawn from the designed screens, not research findings. Validate them with customer interviews and checkout analytics before prioritising.

Unicity Payment · User flow

From cart to delivery. Solid cards are the six screens on this canvas; dashed cards are screens still to design.
