Unicity Wallet · Customer journey map

From first open to everyday money habit

Seven stages, mapped to the screens in this canvas. Persona and emotions are working assumptions to validate with user research.

Pimchanok, 28 · Office worker, Bangkok · Proto-persona

Goals: pay shops by QR, send money to friends, keep track of monthly spending.

Frustrations: crowded wallet apps, unclear fees, fear of sending money to the wrong person.

	Stage 1 **Discover**	Stage 2 **Sign up and onboard**	Stage 3 **Top up**	Stage 4 **Pay and transfer**	Stage 5 **Confirm**	Stage 6 **Receipt and proof**	Stage 7 **Return and manage**
GOAL	Find a simple way to pay and send money from the phone.	Get set up quickly and safely.	Put money into the wallet.	Pay a shop or send money to a friend.	Approve the payment safely.	Know it worked and have proof.	Track spending and keep bills paid.
ACTIONS	Hears about the app from a friend, downloads it, reads the first onboarding screen.	Enters phone number, verifies OTP, sets a 6-digit PIN, lands on Home.	Taps Top up, picks a bank account, taps the ฿500 chip, confirms.	Scans a shop QR or picks a recent recipient, checks the amount, taps Pay or Send.	Enters the PIN or uses Face ID.	Sees the success screen, shares the slip in chat, goes back to Home.	Filters History, pays a bill from a reminder, manages linked accounts.
TOUCHPOINTS	App store A1 Onboarding	Sign up and OTP Set PIN A2 Home	A2 Home D1 Top up B3 PIN	C1 Scan C2 Confirm B1 Transfer B2 Recipient	B3 Confirm with PIN	B4 Success E2 Details	E1 History A3 Alerts D3 Bills E3 Wallet E4 Me
THINKING	*“Is this just another wallet full of menus?”*	*“How long will this take?”*	*“Is there a fee? When does it arrive?”*	*“Am I sending this to the right person?”*	*“Is my money safe?”*	*“Great, I can send the slip to the seller.”*	*“Where did my money go this month?”*
EMOTION Higher is better. Assumed, not measured.	Curious	Reassured	Unsure	Confident	Cautious	Satisfied	In control
PAIN POINTS	Wallet apps look crowded; it is unclear what makes this one different.	Identity steps feel long; worry about sharing personal data.	Linking a bank the first time; fee and arrival time not obvious.	Fear of paying the wrong person; typing numbers while in a queue.	Forgotten PIN; anxiety about mistakes that cannot be undone.	Slips are hard to find again later.	Bills get forgotten; settings are buried deep in menus.
OPPORTUNITIES	One clear promise on the first screen, with Skip always available. **In A1.**	Show sign-up progress and say why each detail is needed. **Screens still to design.**	Show fee and arrival time before confirming; one-tap amount chips. **In D1; fee still a placeholder.**	Show recipient name and wallet ID before sending; Scan in the centre of the tab bar. **In B1, C1, C2.**	Amount and recipient above the keypad; Face ID option. **In B3; Forgot PIN still to design.**	Share and Save image on success; every payment reopens from History. **In B4, E2.**	Money in and out summary; reminders that open bill payment directly. **In E1, A3.**

User flow · Unicity Wallet

How to read this
Each arrow is one tap that opens another screen. The label is the tap-target number on the source screen; the tap maps list every number.

Not drawn as arrows
Back and Close return to the previous screen. The bottom tab bar (Home, Wallet, Scan, History, Me) is on all four tab screens. Extra links are listed inside a card as “also →”.

Not designed yet
Onboarding steps 2 to 4, edit profile, security and PIN settings, limits, help centre, account and card details, link an account, biller list, month picker, cash top-up guide, payment source picker, report a problem, forgot PIN, log-out confirmation.
