Unicity Wallet · UX research

What we need to learn before we build

A research plan for this concept. Hypotheses and gaps below are assumptions from design review, not measured findings.

Phase 1
Discover
Interviews, review

Phase 2
Test
Prototype rounds

Phase 3
Measure
Survey, analytics

01 · GOALS

Research goals

1. Understand how people in Thailand pay, send and receive money day to day, and where wallets fit in.
2. Find what makes people trust, or stop trusting, a wallet with their money.
3. Check that the core flows in this concept can be finished quickly and without mistakes.
4. Confirm or reshape the three proto-personas on the next board.

02 · QUESTIONS

Research questions

1. Which payments happen most often, and in what setting (queue, market, home)?
2. What do people check before they press Pay or Send?
3. How do people prove a payment to a seller or friend today?
4. What do people expect to see about fees and arrival time?
5. How do people track spending, if at all?
6. What happens when something goes wrong: wrong recipient, forgotten PIN, no signal?

03 · HYPOTHESES

What we believe, and how we will test it

H1 · Scan in the centre of the tab bar makes QR payment faster.
Test: time to pay a shop QR from Home (task T3) against a competitor app.

H2 · Showing recipient name and wallet ID before Send reduces wrong transfers.
Test: ask people to explain who they are paying on C2 and B3; count hesitations.

H3 · Showing fee and arrival time before confirming raises trust in top-up.
Test: A/B prototype of D1 with and without the fee line; rate confidence 1–7.

H4 · A money-in and money-out summary in History answers "where did my money go?"
Test: task T6, plus a follow-up interview question on usefulness.

04 · METHODS

Research plan

Sample sizes are recommendations, adjust to budget.

METHOD	WHO	HOW MANY	WHAT WE GET	PHASE
Stakeholder interviews	Product, compliance, customer support, operations	4–6 sessions	Business goals, legal limits, top support tickets	Discover
In-depth user interviews	Mix of the three persona types; current wallet and bank app users	8–10 people	Habits, trust triggers, pain points, quotes	Discover
Competitive review	3–5 wallet and mobile banking apps used in Thailand	3–5 apps	Patterns to keep, gaps to own, heuristic scores	Discover
Prototype usability tests	New and existing wallet users, including people over 50	2 rounds × about 5	Task success, time, errors, SEQ, issues to fix	Test
Survey	Wider audience after redesign decisions	[Target sample]	Feature priority, fee sensitivity, satisfaction baseline	Measure

05 · USABILITY TEST

Tasks and success criteria

Metrics for every task: completion, time on task, errors, SEQ (1–7)

TASK	SCENARIO	SCREENS	SUCCESS WHEN
T1	You just downloaded the app. Create an account and set a PIN.	A1 A5 A6 A7	Lands on Home without help
T2	Send ฿500 to your friend Mali for dinner.	B1 B2 B3 B4	Correct person and amount; can share the slip
T3	Pay the coffee shop by scanning its QR code.	C1 C2 B3	Pays the right amount; confirms the shop name
T4	Add ฿500 to your wallet from your bank.	D1 E5	Can say the fee and arrival time
T5	Pay this month's electricity bill.	D3 D5	Bill paid; can find the receipt again
T6	How much did you spend last month?	E1 E2	Gives a total without counting by hand

06 · KNOWN GAPS

From a heuristic review of this concept

Fees are placeholders. D1, D2 and C2 show [Fee]; real values and wording are needed before testing H3.

No error or offline states. Failed payment, wrong PIN, timeout and no-signal screens are not designed yet.

Forgot PIN is shallow. E6 links to it, but the recovery flow and identity check are missing.

Accessibility not checked. Contrast, text scaling, VoiceOver and TalkBack labels, and Thai language support.

Unicity Wallet · Personas

Three people we are designing for

Proto-personas built from design assumptions. Validate and rewrite them with the user interviews in the research plan.

Primary · Secondary · Proto-persona · not validated

Pimchanok, 28

Office worker · Bangkok
Primary · The everyday payer

> "I just want to scan, pay and get to work. And at the end of the month I want to know where it all went."

GOALS
- Pay coffee, lunch and transport by QR in seconds
- Split dinner bills with friends
- See monthly spending without a spreadsheet

FRUSTRATIONS
- Crowded home screens full of promotions
- Not sure a transfer reached the right person
- Hunting for old slips in the chat history

BEHAVIOURS
Several QR payments a day · Shares slips in chat · Uses Face ID · Tops up weekly

COMFORT (ASSUMED)

KEY SCREENS
A2 Home · C1 Scan · B1 Transfer · B4 Success · E1 History

DESIGN IMPLICATIONS
- Scan reachable with one thumb from every tab
- Share and Save on the success screen
- Money in and out summary at the top of History

Somchai, 52

Market stall owner · Chiang Mai
Secondary · The small seller

> "When a customer says they paid, I need to see it straight away. I can't stop the queue to check."

GOALS
- Get paid by QR and know the money arrived
- Move the day's takings to the bank
- Keep a simple record for his family and taxes

FRUSTRATIONS
- Small text and too many steps
- Customers showing fake or old slips
- Worried about pressing the wrong button

BEHAVIOURS
Shows My QR all day · Withdraws in the evening · Large text setting · Calls family for help

COMFORT (ASSUMED)

KEY SCREENS
C3 My QR · A3 Notifications · D2 Withdraw · E1 History

DESIGN IMPLICATIONS
- Clear "money received" alert with amount and sender name
- Support large text without breaking layouts
- Show fee and arrival time before every withdrawal

Nicha, 20

University student · Khon Kaen
Secondary · The careful budgeter

> "Every baht counts. If there's a fee, tell me before I tap, not after."

GOALS
- Top up her phone and pay small amounts
- Receive money from parents and stretch it to month end
- Avoid fees and running out of balance

FRUSTRATIONS
- Hidden fees and minimum top-up amounts
- Low balance found only at the checkout
- Long sign-up asking for too many documents

BEHAVIOURS
Small, frequent top-ups · Mobile top-up monthly · Checks balance often · Compares apps

COMFORT (ASSUMED)

KEY SCREENS
A5 Sign up · D1 Top up · D4 Mobile top-up · E3 Wallet

DESIGN IMPLICATIONS
- Fee line on every money-moving screen, even when it is free
- Low-balance warning before payment, with a quick Top up
- Short sign-up that explains why each detail is needed

Unicity Wallet · Customer journey map

From first open to everyday money habit

Seven stages, mapped to the screens in this canvas. Persona and emotions are working assumptions to validate with user research.

Pimchanok, 28 · Office worker, Bangkok · Proto-persona
Goals: pay shops by QR, send money to friends, keep track of monthly spending.
Frustrations: crowded wallet apps, unclear fees, fear of sending money to the wrong person.

	Stage 1 **Discover**	Stage 2 **Sign up and onboard**	Stage 3 **Top up**	Stage 4 **Pay and transfer**	Stage 5 **Confirm**	Stage 6 **Receipt and proof**	Stage 7 **Return and manage**
GOAL	Find a simple way to pay and send money from the phone.	Get set up quickly and safely.	Put money into the wallet.	Pay a shop or send money to a friend.	Approve the payment safely.	Know it worked and have proof.	Track spending and keep bills paid.
ACTIONS	Hears about the app from a friend, downloads it, reads the first onboarding screen.	Enters phone number, verifies OTP, sets a 6-digit PIN, lands on Home.	Taps Top up, picks a bank account, taps the ฿500 chip, confirms.	Scans a shop QR or picks a recent recipient, checks the amount, taps Pay or Send.	Enters the PIN or uses Face ID.	Sees the success screen, shares the slip in chat, goes back to Home.	Filters History, pays a bill from a reminder, manages linked accounts.
TOUCHPOINTS	App store A1 Onboarding	Sign up and OTP Set PIN A2 Home	A2 Home D1 Top up B3 PIN	C1 Scan C2 Confirm B1 Transfer B2 Recipient	B3 Confirm with PIN	B4 Success E2 Details	E1 History A3 Alerts D3 Bills E3 Wallet E4 Me
THINKING	*"Is this just another wallet full of menus?"*	*"How long will this take?"*	*"Is there a fee? When does it arrive?"*	*"Am I sending this to the right person?"*	*"Is my money safe?"*	*"Great, I can send the slip to the seller."*	*"Where did my money go this month?"*
EMOTION Higher is better. Assumed, not measured.							
PAIN POINTS	Wallet apps look crowded; it is unclear what makes this one different.	Identity steps feel long; worry about sharing personal data.	Linking a bank the first time; fee and arrival time not obvious.	Fear of paying the wrong person; typing numbers while in a queue.	Forgotten PIN; anxiety about mistakes that cannot be undone.	Slips are hard to find again later.	Bills get forgotten; settings are buried deep in menus.
OPPORTUNITIES	One clear promise on the first screen, with Skip always available. **In A1.**	Show sign-up progress and say why each detail is needed. **Screens still to design.**	Show fee and arrival time before confirming; one-tap amount chips. **In D1; fee still a placeholder.**	Show recipient name and wallet ID before sending; Scan in the centre of the tab bar. **In B1, C1, C2.**	Amount and recipient above the keypad; Face ID option. **In B3; Forgot PIN still to design.**	Share and Save image on success; every payment reopens from History. **In B4, E2.**	Money in and out summary; reminders that open bill payment directly. **In E1, A3.**

How to read this
Each arrow is one tap that opens another screen. The label is the tap-target number on the source screen; the tap maps list every number.

Not drawn as arrows
Back and Close return to the previous screen. The bottom tab bar (Home, Wallet, Scan, History, Me) is on all four tab screens. Extra links are listed inside a card as "also →".

Not designed yet
Onboarding steps 2 to 4, edit profile, security and PIN settings, limits, help centre, account and card details, link an account, biller list, month picker, cash top-up guide, payment source picker, report a problem, forgot PIN, log-out confirmation.
