CARGOLANE · UX RESEARCH

# Research plan & desk research

What we need to learn before and while designing the Cargolane logistics app, how we will learn it, and what published industry research already tells us.

**Research goal**

**Understand how shippers, drivers and warehouse teams book, track and hand over freight today, and where a mobile app removes the most friction.**

**Key questions**

- How do shippers get quotes and book today, and how long does it take?
- When and why do they check shipment status? Who do they call?
- Which documents slow shipments down (customs, POD, invoices)?
- What does a driver need on screen while driving or at the gate?

**Success criteria**

- Validated personas for 3 roles
- Top 10 pain points ranked by frequency × severity
- Prototype task success ≥ 80% on core flows
- Clear MVP scope agreed with stakeholders

## 1 Methods & timeline

| METHOD | WHO / WHERE | SAMPLE | WHEN |
|---|---|---|---|
| **Stakeholder interviews** | Ops lead, sales, customer service | 4 × 45 min | Week 1 |
| **Contextual inquiry** | Warehouse floor & dispatch desk, Bangna | 2 half-days | Week 1–2 |
| **User interviews** | Shippers (SME + mid-size), drivers, warehouse staff | 12 × 60 min | Week 2–3 |
| **Diary study** | Shippers log every status check for 1 week | 6 participants | Week 2–3 |
| **Survey** | Existing customers via LINE OA & email | Target n ≥ 150 | Week 3 |
| **Competitive audit** | Digital forwarders, carrier portals, marketplaces | 8 products | Week 1 |
| **Usability testing** | Clickable prototype (40 screens) | 8 participants | Week 5 |

## 2 Desk research — what published surveys say

**1 in 5**

shippers are satisfied with the visibility and communication they get from logistics providers.

Source: Tive × FreightWaves shipper survey

**56%**

track shipment location in real time, although nearly 90% track location in some form.

Source: Tive × FreightWaves shipper survey

**77%**

of 244 supply-chain professionals call real-time visibility a must-have; nearly half have not implemented it.

Source: Tive, State of Visibility 2024

**67%**

of shippers rank real-time tracking as the most valuable capability a forwarder can offer.

Source: Magaya × adelante SCM, 2025

**57.4%**

of shippers require real-time visibility before carriers can win their business; price is still the #1 selection factor.

Source: project44 × Transport Intelligence

**Top 3**

requests to LSPs: real-time tracking, system integration, and automated documentation & compliance.

Source: Magaya × adelante SCM, 2025

**Thailand context**

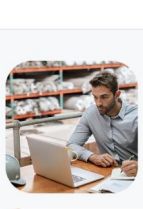
Thai SME road-freight providers face digital-transformation hurdles from limited resources, limited expertise and resistance to change, so the app must work for low-tech partners (LINE, phone, paper) and not assume full system integration.

Source: Mahidol University, Thai SME road-freight digital transformation study (2025)

CARGOLANE · UX RESEARCH

# Proto-personas

Assumption-based personas built from desk research and stakeholder input. Each one is a hypothesis: confirm or rewrite it after the user interviews in weeks 2–3.



### Somchai, 38

Logistics manager · electronics distributor (shipper)

Proto-persona · to validate

> *"I don't want to call three people to find out where one container is."*

Books ~300 loads a month by road and sea for an SME. Works between the office and the warehouse floor, mostly from his phone.

Tech comfort

**Goals**

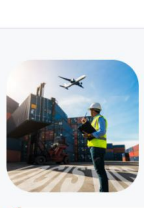
- Know where every shipment is without calling
- Predictable, comparable prices
- Documents ready before customs cut-off

**Pain points**

- Learns about delays from his own customers
- Quotes arrive by email days later
- Paper POD and invoices get lost

**Tools today**

LINE groups · Excel · Email · Phone



### Wichai, 45

Contract truck driver · Laem Chabang runs

Proto-persona · to validate

> *"Just tell me the next stop and the gate number. I can't read long messages while driving."*

Drives a prime mover for two forwarders. Paid per trip, so waiting time at gates and depots costs him money.

Tech comfort

**Goals**

- Clear job list in stop order
- Fewer calls from dispatch
- Get proof of delivery signed fast

**Pain points**

- Job details sent as LINE photos
- Unclear gate times and booking refs
- Paper EIR and POD slips

**Tools today**

LINE · Google Maps · Paper job sheet

### NK Nok, 31

Warehouse supervisor · Bangna DC

Proto-persona · to validate

> *"Stock is right in the system only on the day we count it."*

Runs a shift of 12 pickers. Owns receiving, put-away and dispatch handover to drivers.

Tech comfort

**Goals**

- Accurate stock without manual counts
- Pick lists in walking order
- Smooth handover to the right truck

**Pain points**

- Receiving mismatches found too late
- Reorders triggered by phone calls
- Trucks arrive outside dock slots

**Tools today**

WMS desktop · Handheld scanner · Clipboard · LINE

CARGOLANE · UX RESEARCH

# Competitive audit & affinity map

Where existing options fall short, and the themes we expect to hear in interviews. Affinity notes are hypotheses from desk research and stakeholder input, to be replaced with real interview quotes.

## 3 Competitive audit by category

| CAPABILITY | Global digital forwarder | Carrier / line portal | Freight marketplace | Local LSP (LINE + phone) | Cargolane (target) |
|---|---|---|---|---|---|
| Instant online quote | ● | ◐ | ● | ○ | ● |
| Multimodal booking in one flow | ● | ○ | ◐ | ◐ | ● |
| Live GPS / milestone tracking | ● | ◐ | ◐ | ○ | ● |
| Proactive delay alerts with new ETA | ◐ | ◐ | ○ | ○ | ● |
| Document hub (B/L, invoice, CO) | ● | ◐ | ○ | ○ | ● |
| Thai e-tax invoice & PromptPay | ○ | ○ | ◐ | ◐ | ● |
| Warehouse inventory & picking | ◐ | ○ | ○ | ○ | ● |
| Driver app with digital POD | ○ | ○ | ◐ | ○ | ● |
| Thai-language support via chat | ○ | ◐ | ◐ | ● | ● |

Filled = full · half = partial · outline = none — typical for each category; verify against 8 named products during the audit in week 1.

## 4 Affinity map — expected themes

| Visibility | Communication | Documents | Pricing & booking | Warehouse ops |
|---|---|---|---|---|
| Status checks are reactive: shippers call or message to ask | Job details spread across LINE photos, calls and email | Paper POD/EIR slips get lost or arrive days later | Quotes take days and are hard to compare | Receiving mismatches discovered too late |
| Delay news arrives late, often from the end customer | No single owner for a shipment conversation | Missing certificates block customs filing | Hidden surcharges erode trust | Pick lists not in walking order |
| Location alone isn't enough; ETA and reason matter | Drivers can't read long messages on the road | Finance needs tax invoices in a fixed format | Repeat lanes are re-entered from scratch | Truck arrivals don't match dock slots |

CARGOLANE · UX RESEARCH

# Synthesis & usability test plan

Turning research into design direction: an empathy map for the primary persona, How-Might-We opportunities linked to app screens, and the plan for testing the 40-screen prototype.

### Empathy map · Somchai (shipper)

Hypothesis — validate in interviews

**Says**

- "Where is my container right now?"
- "Send me the invoice in our format."

**Thinks**

- If it's late, my customer will blame me.
- Another portal means another password.

**Does**

- Checks LINE groups 20+ times a day
- Calls the driver when the ETA is unclear

**Feels**

- Anxious before cut-off times
- Relieved when the POD photo arrives

## 5 How might we…

**HMW let shippers know about a delay before their customer does?**
Idea
Push alert with reason + new ETA
Notifications · Shipment detail

**HMW get a comparable quote in minutes, not days?**
Idea
3 ranked quotes with transit time
Select service → Compare quotes

**HMW keep every shipment document in one place?**
Idea
Document hub with readiness score
Documents · Customs

**HMW give drivers only what they need on the road?**
Idea
Stop-ordered jobs, big turn cards
Driver jobs · Navigation

**HMW make proof of delivery instant and trusted?**
Idea
Photo + seal check + e-signature
Checklist → Proof of delivery

**HMW catch receiving errors at the dock?**
Idea
Scan-to-receive with live count
Inbound scan · Inventory

## 6 Usability test plan — prototype round 1

| ID | TASK | SCREENS | SUCCESS = | TARGET |
|---|---|---|---|---|
| T1 | Book a 40ft sea shipment BKK → Singapore | 11–15 | Completes booking | ≤ 3 min |
| T2 | Find out why shipment 0809 is late | 10 · 31 | States reason + new ETA | ≤ 45 s |
| T3 | Upload the missing Certificate of Origin | 18 | File attached to right doc | ≤ 60 s |
| T4 | Driver: start next job and reach checklist | 27 → 34 | Reaches checklist | ≤ 4 taps |
| T5 | Receive a pallet and confirm the count | 36 | Correct count confirmed | ≤ 90 s |
| T6 | Download last month's freight-spend report | 37–38 | File downloaded | ≤ 60 s |

**≥ 80%** Task success rate

**≥ 5.5 / 7** Single Ease Question

**≥ 75** System Usability Scale

**8** Participants (3 shippers · 3 drivers · 2 warehouse)

Targets are design goals for round 1, not measured results. Screen numbers refer to the 40 UI frames on this canvas.

CARGOLANE · UX RESEARCH

# Customer journey map — Shipper

From first discovery to re-booking, for an SME logistics manager shipping across Southeast Asia

PERSONA

**Somchai, 38**

Logistics Manager at Siam Trade Co. (electronics distributor). Ships ~300 loads a month by road and sea, often from his phone on the warehouse floor.

**Goals**

On-time delivery · predictable cost · fewer phone calls

**Frustrations**

Late delay news · paper documents · opaque pricing

| **Stage** |  STAGE 1 **Discover** |  STAGE 2 **Sign up** |  STAGE 3 **Book** |  STAGE 4 **Pay** |  STAGE 5 **Track** |  STAGE 6 **Receive** |  STAGE 7 **Review & re-book** |
|---|---|---|---|---|---|---|---|
| **Goal** | Find a reliable freight partner | Get an account without paperwork | Book the right service at the right price | Pay securely and get an invoice for finance | Know where cargo is and when it arrives | Confirm delivery and close the job | Control cost and repeat what works |
| **Actions** | Compares forwarders, reads reviews, asks peers | Creates account, verifies phone, picks role | Selects mode, route, cargo; compares quotes | Reviews summary, pays by card, PromptPay or terms | Checks status, live map, chats with support | Gets POD, checks seal and photos, updates stock | Reviews KPIs, rates carrier, re-books lane |
| **Touchpoints** App screens | Website · Onboarding | Sign up · Verify OTP · Choose role | Select service · Route · Cargo · Quotes | Review · Payment · Confirmed | Shipments · Detail · Live map · Support | Proof of delivery · Inbound scan | Reports · Analytics · Booking |
| **Thinking** | *"Can one provider really handle sea, road and air for us?"* | *"Another long registration form…"* | *"Nice — I can compare three carriers side by side."* | *"I need a tax invoice my finance team accepts."* | *"Why is it delayed? My customer keeps calling me."* | *"Photo and signature in one place — done."* | *"Re-booking last month's lane took 30 seconds."* |
| **Emotion** 1 = frustrated · 5 = delighted | 3 · Neutral | 2 · Anxious | 4 · Satisfied | 3 · Neutral | 2 · Anxious | 5 · Delighted | 4 · Satisfied |
| **Pain points** | ! Quotes arrive by email days later; pricing is opaque | ! Company KYC and OTP feel slow; unsure which role to choose | ! Container types and HS details are confusing | ! Hidden fees; needs VAT invoice and credit terms | ! Delays discovered late; calls to drivers for updates | ! Paper PODs got lost in the past | ! Spend data scattered across spreadsheets |
| **Opportunities** | + Instant indicative rates on onboarding screens | + 3-step progress bar, role cards with examples | + Smart defaults, inline help, saved lanes | + Transparent breakdown, Net-30 terms, auto e-tax invoice | + Proactive delay alerts with new ETA and reason | + Digital POD with photos, seal check and e-signature | + One-tap re-book, monthly spend and carrier scores |

## User flow — Shipper

Hi Somchai! How can I help with your shipments today?
1:50 PM

CGL-2411-0809 to Tokyo shows delayed. What happened?
1:51 PM

The flight was rescheduled due to weather at Narita. New ETA is 15 Nov, 6 hours later than planned.
1:52 PM

CGL-2411-0809
BKK → NRT · ETA 15 Nov

Thanks. Can you notify the consignee?
1:53 PM

Done — they've been emailed the updated ETA.
